Solid Surface Daily Maintenance

KKR solid surface is a solid, non-porous material primarily composed by acrylic polymer. Although it is easy to maintain, basic maintenance is still required to keep it perfectly clean as new.

1. Most stain is no threat to KKR Solid Surface

KKR solid surface is solid non porous material with high density, it is resistant to most stains from food, cooking oil, sauce, vinegar, alcohol, iodine, citric acid, lipstick, shoeshine and ink. Because of its durability and low-cost easy maintenance, it is widely used for home and commercial application.

2. Easy daily cleaning and maintenance

Water stain or slight stain can be removed by washcloth soaked with detergent or soap.

3. Strong stain or bad cut

Strong stain can be removed by detergent and scouring sponge. For even more stronger stain, handle with fine sand paper, then remove by scouring cloth soaked with water, the gloss of the surface can be restored.

4. Strong stain, cigarette burn mark and slight scratch

Strong stain can be removed by sand paper with water, and scratch can be repaired by polishing machine. For more severe damage please get in contact with KKR, where is fully equipped for repairing damage of solid surface.

1. To reach matte surface, polish with 400-600 grit sandpaper to erase scratches, then recover with detergent and washcloth.

2. To reach glossy surface, polish with 800-1200 grit sandpaper first, then polish again with woolen polishing disc and wax at a low speed around 1500-2000rpm, clean the surface with clear washcloth. For recovering small white scratch, can use edible oil and dry washcloth to wipe it.

How To Use Acrylic Solid Surface Countertops Better?

1. Heat:
Use heat protection pad or trivet (with rubber feet) under hot cookware, or else leave cookware after cooling down;
Never put hot pans, specially cast iron on acrylic solid surface directly.

2. Scratches:
Use a chopping board, never cut or chop on acrylic solid surface directly. If slightly scratch on surface, use 180-400 grit sandpaper to wipe it away, and clean again with washcloth.

3. Chemical spillage:
Avoid from strong chemicals (such as paint stripper, brush cleaners, metal cleaners, oven cleaners, cleaners containing methylene chloride, strong acid detergent, acetone-based nail varnish etc).
If touch with above chemicals accidentally, wash it with soapy water immediately. For nail varnish spilled on, clean with non-acetone detergent.
